**Highlights**

MyUncleVision: entropy-guided, label-free discovery of unusual tissue organization in whole-slide images, with a maintenance-lattice order–entropy framework

- Embedding lattice measures tissue order with MyUncle's definitions
- Disorder and entropy extend to d dimensions and equal MyUncle's at d = 2
- Three-axis novelty ranks unusual states, not artifacts or routine histology
- Synthetic test: works with handcrafted features, fails with DINOv2 defaults
- One-command open container; kidney evaluation protocol given, not yet run
